

Submersible Deep Well Water Pump - Stainless Steel

This submersible deep well water pump efficiently extracts water from wells and boreholes. The cylindrical stainless steel body provides corrosion resistance and durability.

Product Overview

Professional Submersible Deep Well Pump

This stainless steel submersible pump is engineered for efficient water extraction from deep wells and reservoirs. Designed for versatility, it supports a wide range of applications including domestic water supply, civil infrastructure, industrial systems, and agricultural irrigation. Its robust construction ensures long-term reliability and performance in demanding environments.

Technical Specifications

Model	100QJH10
Max Water Temperature	55 °C
Minimum Well Diameter	102 mm
Maximum Immersion Depth	40 m

Applications

Suitable Applications	Domestic Water Supply, Civil Engineering, Industrial Use, Garden Irrigation
-----------------------	---

Build Quality

Material
Stainless Steel
