

Submersible Dewatering Pump

This submersible dewatering pump is designed for removing water from various environments such as construction sites and mines. It features a durable construction and powerful motor for reliable performance in demanding applications.

Product Overview

Professional Dewatering Solution

The KBZ series submersible dewatering pump is a robust and efficient solution engineered for demanding environments such as construction sites and mining operations. Designed for reliability, this pump features a durable, corrosion-resistant construction and a high-capacity motor to ensure effective water removal with minimal downtime. Its submersible design allows for direct operation in water, providing maximum efficiency and ease of installation for industrial dewatering needs.

Technical Specifications

Performance Data

Model	Voltage	Flow (m ³ /h)	Head (m)	Power (kW)	Outlet (inch)
KBZ2-1.5	380	12	15	1.5	2"
KBZ2.5-1.5	380	18	15	1.5	2.5"
KBZ3-1.5	380	25	7	1.5	3"
KBZ2-2.2	380	9	22	2.2	2"
KBZ3-2.2	380	25	15	2.2	3"
KBZ4-3.0	380	43	13	3	4"
KBZ4-3	380	50	7	3	4"

Rated Voltage

380 V

Key Features

Design Advantages

- Corrosion-resistant materials
- High-capacity pumping rate
- User-friendly installation
- Engineered for minimal downtime

Ideal Applications

Construction Sites, Mining, Industrial Dewatering, Submersible Operations
