

Submersible Drainage and Irrigation Water Pump

This submersible water pump is designed for efficient drainage and irrigation. It features a robust construction for demanding applications, ensuring reliable performance in various environments.

Overview

Professional Submersible Water Solution

This high-performance submersible pump is engineered for demanding drainage and irrigation applications. Its robust construction ensures reliable operation in both agricultural and industrial settings. Designed for efficiency and longevity, it provides a dependable solution for moving water in various challenging environments.

Key Features

Suitable Applications

Agricultural Irrigation, Industrial Drainage, Water Management

Design and Build

Build Standard

Robust Design • Submersible • Heavy-Duty
