

Submersible Drainage Pump

This submersible pump is designed for drainage and irrigation applications. It features a durable construction with a stainless steel motor housing and a thermoplastic base.

Overview

Professional Submersible Drainage Pump

This heavy-duty submersible drainage pump is engineered for efficient water management in demanding environments. Featuring a robust stainless steel motor housing and a durable thermoplastic base, it provides reliable performance for drainage and irrigation. Ideal for professional use, it is well-suited for construction sites, residential basements, and agricultural applications.
