

Submersible Drainage Water Pump

This submersible water pump is designed for drainage and irrigation. It features stainless steel construction for durability and includes a float switch for automatic operation.

Product Overview

High-Performance Drainage Solution

This submersible water pump is engineered for reliable drainage and irrigation in various professional settings. Constructed with high-quality stainless steel, it ensures excellent durability and corrosion resistance during operation. The unit features an integrated float switch for fully automatic water level management, making it perfect for sumps, basements, and flood control.

Technical Specifications

Water Compatibility

- Clean water
- Slightly dirty water

Material	Stainless steel
Operation	Automatic (Float switch equipped)
Suitable Applications	Drainage, Irrigation, Sump pumping, Basement water removal

Design Features

Design Advantages

Corrosion resistant • Portable • Easy installation
