

Submersible Drainage Water Pump

This submersible water pump is designed for drainage and irrigation applications. It is constructed with durable plastic and metal components and is suitable for pumping clean or slightly dirty water in various settings.

Product Overview

Submersible Drainage Water Pump

This submersible water pump is engineered for efficient drainage and irrigation across residential and industrial environments. Featuring a robust combination of durable plastic and metal components, it is built to handle clean and slightly dirty water. The inclusion of a float switch and an easy-connect hose adapter ensures reliable, automatic operation in basements, ponds, and construction sites.

Technical Specifications

Pump Type	Submersible
Operation Mode	Automatic (via float switch)
Construction Materials	Durable Plastic, Metal
Portability	Yes

Application Suitability

Typical Applications

- Basement drainage
- Pond maintenance
- Construction site water removal
- General irrigation

Water Compatibility

Clean Water • Slightly Dirty Water
