

Submersible Drainage Water Pump with Float Switch

Submersible water pump designed for drainage and irrigation applications. It features a robust construction for durability and is equipped with a float switch for automatic operation based on water level.

Product Overview

Reliable Drainage Solution

This submersible drainage water pump is engineered for demanding tasks in drainage and irrigation. With a robust build, it ensures consistent performance in environments such as basements, ponds, and construction sites. The integrated float switch provides convenient, fully automatic operation triggered by water level changes.

Technical Features

Operation Mode

Automatic • Submersible

Suitable Applications

- Basement drainage
- Garden pond maintenance
- Construction site dewatering
- General irrigation

Construction

Robust Design, Durable Construction
