

Submersible Electric Water Pump

This submersible electric pump is designed for various water pumping applications. The oil-filled design provides lubrication and cooling for the motor, enhancing its performance and lifespan.

Product Overview

Professional Submersible Water Pump

The QY260-3.5-4 is a heavy-duty submersible electric pump engineered for reliable performance in demanding water transfer environments. Featuring a robust oil-filled motor design, it ensures superior lubrication and cooling for extended operational lifespan. Its versatile construction, including integrated lifting lugs, facilitates efficient installation and handling for irrigation and drainage projects.

Technical Specifications

Model	QY260-3.5-4
Cooling Type	Oil-filled

Key Features

Primary Advantages

- Oil-filled motor for enhanced lubrication
- Integrated lifting lugs for safe transport
- Robust cylindrical construction
- Ventilation slots for efficient flow

Applications

Suitable Applications	Water Drainage, Irrigation, Water Transfer
-----------------------	--
