

Submersible Electric Water Pump with Float Switch

This submersible electric water pump is designed for efficient water removal. It features a durable construction with a stainless steel motor housing and thermoplastic pump body, and includes an automatic float switch for reliable operation and protection against dry running.

Product Overview

Submersible Electric Water Pump

This submersible electric water pump is designed for reliable water supply from wells or reservoirs, making it an ideal choice for domestic, civil, and industrial applications. It features a robust design suitable for garden irrigation and water transfer. Equipped with an automatic float switch for dry-run protection, this pump ensures efficient performance in diverse operational environments.

Operating Conditions

Maximum Fluid Temperature	35 C
Maximum Sand Content	0.25 %

Technical Specifications

Motor Construction	Rewindable motor or full obturated screen motor
Voltage and Frequency	220v-240v / 50hz

Compliance and Options

Customization Options

- Special mechanical seal
- Alternative voltages
- 60hz frequency

Standards and Compliance	ISO 9906, CE
--------------------------	--------------

Applications

Primary Applications

- Water supply from wells or reservoirs
- Domestic usage
- Civil and industrial applications
- Garden use and irrigation
