

Submersible Pond Pump for Waterfalls and Fountains

This submersible pond pump is designed for continuous operation in ponds and water features. Its robust motor ensures reliable performance, while a filter cage prevents debris from entering.

Overview

Professional Submersible Pond Pump

This submersible pond pump is specifically engineered for continuous operation in various water features, including ponds, waterfalls, and fountains. Built with a robust motor for long-term reliability, it ensures consistent water circulation. The integrated filter cage effectively prevents debris from entering the pump, protecting the internal components and maintaining optimal flow performance for European electrical standards.

Technical Specifications

Voltage Standard

European Standard

Application

Waterfalls, Fountains, Pond Circulation

Operation Mode

Continuous

Features

Protection Features

- Robust motor design
- Integrated debris filter cage
