

Submersible Sewage Pump for Drainage and Irrigation

This submersible sewage pump is designed for efficient and reliable wastewater removal. Constructed with durable materials, it is suitable for demanding applications.

Product Overview

Professional Submersible Pumping Solution

This high-performance submersible pump is engineered for reliable drainage, irrigation, and water supply tasks. Built with a durable stainless steel body and a robust motor with copper windings, it ensures longevity in demanding environments. It is an ideal solution for agricultural irrigation, construction drainage, livestock breeding, and general household or industrial water management.

Performance Specifications

Max Immersion Depth	5 m
Max Liquid Temperature	40 °C
Liquid PH Range	4-10
Max Liquid Density	1.03 kg/m ³

Technical Construction

Construction Materials

- Stainless steel pump body
- Stainless steel welded shaft
- Copper motor windings

Motor Protection	Built-in thermal protector, IPX8 Protection, Class F Insulation
------------------	---

Certifications

Quality Compliance

CE • ISO 9001 • CCC • GS • RoHS
