

Submersible Sewage Pump for Irrigation

This submersible sewage pump is designed for drainage and irrigation applications. It is suitable for handling wastewater and sewage in agricultural settings.

Product Overview

High-Efficiency Submersible Sewage Pump

The WQ series submersible sewage pump is engineered for robust performance in agricultural irrigation and wastewater management tasks. Featuring a durable cylindrical housing and an integrated lifting handle, this pump is designed for ease of installation and reliable operation in challenging environments. Its optimized motor design ensures efficient handling of sewage and wastewater to support seamless irrigation processes.

Technical Specifications

Pump Type	Submersible Sewage Pump
Target Applications	Irrigation, Wastewater Management, Sewage Handling, Agricultural Drainage

Design Features

Construction Features

- Cylindrical housing for submerged use
- Top-mounted lifting handle
- Side outlet configuration
- High-efficiency integrated motor
