

Submersible Sewage Pump with Thermal Protection

This submersible sewage pump features a two-pole induction motor and IP68 protection. It is equipped with thermal protection for single-phase operation and is suitable for continuous service.

Product Overview

Submersible Sewage Pump Overview

This submersible sewage pump is engineered for efficient and reliable wastewater management in demanding environments. Built with durable materials and featuring an optimized impeller design, it effectively handles dirty water, domestic wastewater, and solids up to 35mm. The inclusion of integrated thermal overload protection ensures long-lasting motor performance and prevents operational damage.

Technical Specifications

Maximum Particle Diameter	35 mm
Key Features	Thermal Protection, Submersible, Wastewater Handling, Durable Construction

Applications

Typical Applications

- Municipal wastewater treatment
- Industrial effluent discharge
- Agricultural irrigation
- Domestic waste water management
