

# Submersible Sewage Water Pump

This submersible pump efficiently removes sewage water. Its robust construction and corrosion-resistant materials ensure lasting performance.

## Product Overview

### Professional Wastewater Management

This sewage submersible pump is engineered for efficient and reliable wastewater removal in demanding environments. Featuring robust, corrosion-resistant construction, the unit ensures long-lasting performance for industrial and commercial applications. Its high-flow motor and specialized design for solids handling make it an ideal solution for sewage, drainage, and effluent transfer.

## Technical Specifications

### Design Features

- Corrosion-resistant materials
- High flow rate motor
- Solids handling capability
- Compact installation design

### Material Quality

Corrosion-Resistant • Heavy-Duty

### Suitable Applications

Sewage, Drainage, Effluent Transfer
