

Submersible Slurry Pump

These pumps are well-suited for the mining and construction industries. The impeller and suction plate receive a high chrome heat treatment for enhanced abrasion resistance.

Product Overview

High-Performance Submersible Slurry Pump

This submersible slurry pump is engineered for demanding drainage and irrigation applications. Built with high-grade, heat-treated materials, it ensures durability and resistance against abrasive slurries. The robust construction and efficient design make it an ideal solution for industrial and agricultural fluid transfer needs.

Material Composition

Impeller Type	Semi-open, high chrome, heat treated
Suction Plate	High chrome, heat treated

Technical Components

Stator	CR600#
Shaft Material	SS304
Bearing Manufacturer	NSK

Key Features

Design Highlights	Submersible, Heat Treated, High Chrome, Corrosion Resistant
