

Submersible Solar Water Pump for Deep Wells

This high-efficiency submersible solar pump is designed for deep well applications. Its durable stainless steel construction ensures longevity and resistance to corrosion.

Product Overview

High-Efficiency Solar Pumping Solution

This submersible solar pump is engineered specifically for deep well applications, offering a robust and reliable solution for water extraction in remote locations. Constructed with durable stainless steel, it ensures long-term corrosion resistance and performance. It is an ideal choice for consistent water flow in irrigation, livestock watering, and domestic supply systems.

Technical Specifications

Construction Material

Stainless Steel

Pump Type

4TSSC Solar Pump

Pump Diameter

4 inch

Key Features

Ideal Applications

Irrigation, Livestock Watering, Domestic Use, Deep Well Extraction

Maintenance

Engineered for easy installation and maintenance with a long operational lifespan.
