

Submersible Stainless Steel Centrifugal Pump with Float Switch

This submersible centrifugal pump is constructed from stainless steel. It is equipped with a float switch for automatic operation and is suitable for handling clean water and non-corrosive fluids in drainage, irrigation, and industrial applications.

Product Overview

Submersible Centrifugal Pump

This submersible centrifugal pump is engineered for reliability and efficiency in handling clean water and non-corrosive fluids. Constructed from durable stainless steel, it is designed to withstand demanding environments while providing consistent performance. Equipped with an integrated float switch, the unit offers automatic operation based on water levels, making it an ideal solution for drainage, irrigation, and various industrial fluid management processes.

Technical Specifications

Material	Stainless Steel
Operation Mode	Automatic (Float Switch)
Compatible Fluids	Clean Water, Non-corrosive Fluids

Applications

Primary Applications

- Drainage
- Irrigation
- Industrial Processes
