

Submersible Sump Pump for Drainage

This submersible sump pump is designed for efficient and reliable drainage in various applications. Constructed with durable materials, it offers robust performance in demanding environments.

Product Overview

AS Series Submersible Sump Pump

The AS Series submersible sump pump is engineered for high-efficiency drainage across a variety of demanding environments. Built with durable materials, this unit ensures robust performance and long-lasting reliability for critical water removal tasks. Its compact design facilitates easy installation in confined spaces, making it an ideal solution for dewatering basements, construction sites, and flood-prone areas.

Key Features

Design Advantages

- Compact form factor for confined spaces
- High-durability construction materials
- Powerful motor for effective water removal

Ideal Applications

Basement Dewatering, Construction Sites, Flood Control, Drainage Systems

Performance

Reliability

Robust Performance • Heavy Duty
