Overview

High-Efficiency Submersible Wastewater Pump

This heavy-duty submersible pump is engineered for efficient wastewater management across municipal, industrial, and construction sectors. Built with robust cast iron components and versatile impeller options, it is designed to handle solids and debris without clogging. Its reliable construction ensures long-term performance in demanding fluid handling environments.

Performance

Capacity

15000 USGPM
Max Capacity

3000 m3/h
Max Capacity

Maximum Head 180 feet

Operating Temperature 150 °F

Technical Specifications

Operating Speeds

- 2900/1450/980 rpm
- 3500/1750/1180 rpm

Materials and Construction

Material Specifications

Component	Material
Casing	Cast iron
Impeller	Cast iron / Stainless steel

Applications

Primary Applications

Municipal Wastewater, Industrial Waste, Rain Water, Sewage Works, Construction
