

# Submersible Water Circulation Pump

This compact submersible pump is designed for various water circulation applications. It provides efficient and reliable performance for continuous operation in aquariums, fountains, hydroponics, and similar uses.

## Product Overview

### Compact Submersible Water Circulation Pump

This submersible water circulation pump is engineered for efficient and reliable performance across a range of aquatic applications, including hydroponics, fountains, and aquariums. Its compact, durable plastic housing allows for discreet installation in confined spaces, while integrated suction cups ensure secure and stable mounting. Designed for continuous operation, this unit provides consistent flow rates to maintain optimal water health in various professional and recreational systems.

## Technical Specifications

### Performance Highlights

**1 boolean**

Continuous Operation

### Compatible Applications

Aquariums, Hydroponics, Fountains, Water Circulation

## Design Features

### Mounting Options

Suction cup mounting

### Housing Material

Durable plastic
