

# Submersible Water Drainage Pump

This submersible pump is designed for water drainage and similar tasks. It features a cylindrical body, discharge port, and cooling fins, making it suitable for fluid transfer in industrial and domestic applications.

## Product Overview

### High-Efficiency Drainage Solution

This submersible water drainage pump is engineered for reliable fluid transfer in both industrial and domestic environments. Its robust construction combines durable metal and plastic components to ensure longevity and consistent performance. Designed with an integrated discharge port and an optimized cooling base, this unit is built to handle demanding water removal tasks efficiently.

## Technical Specifications

### Key Features

- Submersible design
- Cylindrical body architecture
- Integrated discharge port with hose fitting
- Cooling fin base for thermal management

### Materials

Metal, Plastic

## Applications

### Primary Applications

Industrial Drainage • Domestic Water Transfer • Fluid Management
