

Submersible Water Pump

This submersible pump is engineered for drainage and irrigation. It is designed for reliable operation in demanding agricultural environments.

Overview

Professional Submersible Pumping Solution

This high-performance submersible pump is engineered for demanding industrial, agricultural, and construction water management tasks. It provides reliable operation for applications ranging from irrigation and water tower supply to fountains and shallow wells. With a robust design, this pump ensures consistent water delivery even in challenging environments.

Performance Metrics

Key Operating Metrics

80 m³/h
Max Discharge

60 m
Max Head

9.2 kW
Max Power

Technical Specifications

Operating Range

Metric	Range
Discharge Capacity	15 - 80 m ³ /h
Head Height	11 - 60 m
Power Output	3 - 9.2 kW

Certifications

Compliance and Standards	ISO9001, CE
--------------------------	-------------

Applications

Typical Applications

- Agricultural irrigation
- Industrial water supply
- Construction water systems
- High-rise building water supply
- Pool and fountain maintenance
- Shallow well water extraction
