

Submersible Water Pump

This submersible pump is suitable for industrial, agricultural, and domestic applications. Its design allows it to operate in deep wells and tanks for efficient water transfer.

Product Overview

Professional Submersible Water Pump

The 100QJC2 is a robust submersible pump engineered for versatility in industrial, agricultural, and domestic environments. Featuring a high-grade stainless steel body, it offers superior corrosion resistance and long-term durability in challenging fluid environments. Its specialized submersible design makes it an ideal solution for efficient water transfer and drainage in deep wells or storage tanks.

Technical Specifications

Model	100QJC2
Body Material	Stainless Steel
Pump Type	Submersible

Application

Suitable Applications	Industrial, Agricultural, Domestic, Deep Well, Tank Drainage
