

Submersible Water Pump

This submersible pump is engineered for efficient and reliable operation in submerged environments. It is ideal for water extraction, drainage, and irrigation purposes.

Overview

Submersible Water Pump 100QJC3

The 100QJC3 is a professional-grade submersible pump engineered for consistent performance in challenging submerged environments. Constructed with high-quality, corrosion-resistant materials, this unit is designed to provide long-term reliability and efficiency. It serves as an ideal solution for a variety of critical B2B applications including water extraction, industrial drainage, and large-scale irrigation.

Technical Specifications

Model Number	100QJC3
Key Features	Submersible, Corrosion-resistant, High Efficiency, Industrial Grade

Applications

Suitable Applications

- Water extraction
- Industrial drainage
- Agricultural irrigation
