

Submersible Water Pump

This submersible pump features a cylindrical stainless steel body. It is engineered for efficient and reliable operation in submerged environments, suitable for residential, irrigation, and industrial applications.

Product Overview

High-Efficiency Submersible Pumping Solution

This professional-grade submersible water pump features a durable, cylindrical stainless steel body engineered for consistent performance in submerged environments. Designed for versatility, it is an ideal choice for residential water supply, agricultural irrigation, and demanding industrial processes. Its robust construction ensures reliable operation in wells and storage tanks, providing a long-lasting solution for various fluid transfer needs.

Technical Specifications

Body Material	Stainless Steel
Installation Type	Submersible

Application Suitability

Common Applications	Residential Water Supply, Agricultural Irrigation, Industrial Processes
