

Submersible Water Pump for Drainage

Submersible water pumps designed for efficient water removal and drainage. These pumps feature a robust construction for durability and reliable performance in demanding environments.

Product Overview

Professional Submersible Drainage Pump

This submersible water pump is engineered for efficient water removal in demanding environments such as construction sites and residential basements. Built for durability and reliable performance, it is designed for moving clear or light sewage water. It features essential safety protocols to ensure longevity and operational security during general water transfer tasks.

Safety and Operation

Safety Guidelines

- Ensure power voltage matches the rated voltage before use
- Never run the pump without water to prevent motor damage
- Use a leakage protection switch during operation
- Do not use the power cable as a handle for lifting
- Avoid transporting corrosive liquids
- Not intended for use in flammable or explosive environments
- Do not operate if the power cable is damaged

Operational Requirements

Application Scope

Clear Water, Light Sewage, Construction Drainage, Basement Drainage

Maintenance

Care and Storage

- Prevent silt and debris suction to avoid clogging or wear
- Clean thoroughly before long-term storage
- Store in a dry location when not in use
- Do not disassemble or repair without professional assistance
