

Submersible Water Pump for Drainage and Irrigation

This heavy-duty submersible water pump is designed for drainage and irrigation applications. It is capable of handling solids and debris and is equipped with a powerful motor for efficient water transfer.

Product Overview

High-Performance Drainage and Irrigation

This heavy-duty submersible water pump is engineered for demanding drainage and irrigation applications across agricultural, construction, and industrial sectors. Its robust construction ensures reliable, long-term performance even in challenging environmental conditions. With a powerful motor and advanced design capable of handling solids and debris, this pump provides efficient water transfer for your professional operational needs.

Technical Specifications

Build Quality

Heavy-duty • Robust Construction

Application Areas

Agricultural, Construction, Industrial

Fluid Handling

Capable of handling solids and debris
