

# Submersible Water Pump for Interior Use

This submersible pump is designed for interior applications such as drainage and irrigation. The cylindrical pump, constructed from metallic material, features an outlet port at the top for water discharge.

## Product Overview

### QXNY Series Submersible Pump

The QXNY series submersible pump is engineered with an internal installation structure, ensuring superior cooling performance and long-term durability. Designed for high efficiency and energy savings, this unit features robust mechanical seals and a reliable motor assembly. It is an ideal solution for versatile water transfer needs in agricultural, architectural, and industrial settings.

## Technical Specifications

### Construction Features

- Integrated motor and pump assembly
- Internal installation structure for cooling
- Durable mechanical seals

Series

QXNY

## Applications

Typical Applications

Agriculture, Architecture, Industrial Drainage, Irrigation, Well Water Elevation, Water Transfer

## Performance Highlights

### Key Performance Characteristics

**1 High**
