

Submersible Water Pump for Irrigation and Water Supply

This submersible pump is designed for efficient and reliable water transfer. Its compact design allows for easy installation and provides consistent flow and pressure for optimal performance.

Product Overview

Efficient Water Transfer Solution

This submersible water pump is engineered for reliability and energy efficiency, making it an ideal choice for irrigation, well water extraction, and general water supply needs. Designed with low voltage operation and an ultra-strong overload configuration, it maintains consistent flow and pressure across diverse operating environments. Its compact build ensures straightforward installation, even in confined spaces.

Key Features

Performance Highlights

1 Low-Voltage Design

Voltage Efficiency

1 Ultra-Strong

Overload Protection

Suitable Applications

Irrigation, Well Water Extraction, General Water Supply

Technical Details

Design Advantages

- Compact form factor for easy installation
- Durable construction for long-lasting performance
- Energy-saving operation
- Consistent flow and pressure delivery
