

# Submersible Water Pump for Ponds and Aquariums

This submersible water pump is designed for water circulation and aeration. It has adjustable flow control for customized water output, making it suitable for ponds, aquariums, and hydroponic systems.

## Overview

### Versatile Submersible Water Pump

This durable submersible water pump is engineered for efficient water circulation and aeration across a variety of aquatic environments. It features a robust motor housing designed for reliability and includes a vertical extension tube for flexible setup options. With an integrated adjustable flow control valve, users can easily customize water output to meet the specific requirements of ponds, aquariums, or hydroponic systems.

## Technical Specifications

### Key Features

- Submersible design
- Vertical extension tube included
- Adjustable flow control valve
- Durable motor housing

### Primary Applications

Ponds, Aquariums, Hydroponic Systems
