

Submersible Water Pump - QDX Series

The QDX series submersible water pumps are designed for efficient water removal. These pumps have a robust construction and a sealed submersible motor.

Overview

Professional Submersible Water Pump

The QDX series submersible water pump is designed for efficient water removal across a wide range of environments, including residential basements, agricultural zones, and active construction sites. Built with a focus on durability and performance, it features a robust construction and a sealed motor system to ensure long-term reliability. With integrated safety features like a thermal overload protector and automatic float switch operation, this pump is an ideal solution for automated and safe water management.

Technical Specifications

Safety Protections

- Built-in thermal overload protector
- Sealed motor housing
- Automatic float switch

Design Features

Compact • Portable • Submersible • Easy Maintenance

Construction Material

Cast Iron, Aluminum Alloy

Applications

Common Applications

- Basement drainage
- Construction site water removal
- Agricultural irrigation and drainage
