

# Submersible Water Pump SP-400D

The SP-400D water pump is a robust solution for water transfer applications. This submersible pump features durable construction and is designed for reliable performance in diverse environments.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance Submersible Pumping Solution

The SP-400D is a robust and efficient submersible pump engineered for versatile water transfer applications, including drainage, irrigation, and water features. Its durable construction ensures reliable operation in both clean and dirty water environments. Equipped with a powerful motor, this unit is designed for consistent performance and ease of use in residential or commercial settings.

## Technical Specifications

### Electrical Requirements

**110 V**

Min Voltage

**120 V**

Max Voltage

**60 Hz**

Frequency

### Operational Features

- Automatic operation with float switch
- Suitable for clean and dirty water
- Compact design for portability
- Ribbed hose connector included

Model

SP-400D
