

Submersible Water Pump with Float Switch

Submersible water pumps designed for efficient drainage and irrigation. Featuring float switches for automatic operation, these pumps are suitable for various applications including dewatering, sewage, and general water transfer.

Product Overview

Submersible Water Pump with Float Switch

This submersible water pump is engineered for high-efficiency drainage, sewage management, and irrigation tasks. Equipped with a reliable integrated float switch, the unit provides fully automatic operation, turning on and off based on water levels to prevent dry running. Its durable construction ensures longevity and consistent performance in demanding water transfer environments.

Key Features

Key Operational Benefits

- Automatic operation via integrated float switch
- Submersible design for efficient drainage
- Durable material construction
- Versatile application in dewatering and sewage
