

Submersible Water Pump with Float Switch

This submersible pump is designed for both fresh and marine water applications. The energy-efficient design provides a 50% energy saving.

Overview

High-Performance Submersible Solution

This submersible water pump is engineered for both fresh and marine water environments, offering versatility for aquariums, ponds, and various water features. It features an advanced energy-efficient design that delivers up to 50% power savings compared to standard models. The integrated float switch ensures reliable, automatic on/off operation based on real-time water levels.
