

Submersible Water Pumps for Drainage

These submersible water pumps are designed for various drainage applications. The pumps have a robust construction with plastic and metal components and are suitable for removing water from basements, ponds, and other areas prone to flooding.

Product Overview

High-Efficiency Drainage Solution

These submersible water pumps are engineered for reliable performance in diverse drainage applications, including basements, ponds, and flood-prone areas. Constructed with a durable blend of plastic and metal components, they are built to withstand demanding environments while ensuring longevity. Designed for convenience, the units feature automatic operation via an integrated float switch, making them a practical and low-maintenance choice for professional water removal needs.

Technical Specifications

Common Applications

- Basement drainage
- Pond water removal
- Flood control

Maintenance

Easy Installation • Low Maintenance

Materials

Plastic, Metal

Operation Mode

Automatic with float switch
