

# Submersible Water Transfer Pump

Submersible water pump designed for efficient water transfer and drainage applications. Features a durable housing and adjustable height for versatile use.

## Product Overview

### Versatile Submersible Water Transfer Solution

This submersible water pump is expertly engineered for efficient water transfer and drainage applications across various environments. Constructed with a durable, resilient housing, it ensures long-term reliability for demanding tasks. Featuring an adjustable height for flexible positioning, this unit is perfectly suited for irrigation projects, pond maintenance, and general water removal requirements.

## Technical Features

### Design Features

- Submersible design for underwater operation
- Durable heavy-duty housing
- Adjustable height mechanism

### Product Status

New • Industrial Grade

### Suitable Applications

Irrigation, Pond Maintenance, Drainage, Water Removal
