

Submersible Water Transfer Pump with Floatation System

This submersible water pump is designed for efficient water transfer. It features a floatation system, robust construction with stainless steel components, and a built-in level sensor for automatic operation.

Product Overview

Submersible Water Transfer Pump

This high-performance submersible water transfer pump is engineered with a specialized floatation system to maintain optimal operating depth automatically. Built with durable stainless steel components, it ensures long-lasting operation and superior corrosion resistance in demanding environments. Integrated with a precision level sensor, the unit enables seamless, automatic start-stop cycles to streamline water transfer processes efficiently.

Technical Specifications

Primary Material	Stainless Steel
Key Features	Submersible, Floatation System, Level Sensor, Corrosion Resistant
Operational Mode	Automatic (Start/Stop via Level Sensor)
Application Compatibility	Clean Water
