

Suction Type Grain Destoner

The suction type gravity stoner is used for cleaning grains in processing. It removes stones and heavier impurities from grains like wheat, paddy, soybean, rapeseed, and peanut.

Product Overview

High-Efficiency Grain Purification

The TQSX125 suction-type gravity stoner is a professional-grade solution engineered for the precise separation of stones and heavy impurities from grain streams. By combining advanced vibrating screen technology with controlled airflow, it effectively stratifies materials by density to ensure maximum product purity. Its robust, compact design allows for seamless integration into diverse processing lines, providing durability and ease of operation for demanding industrial environments.

System Type

Technical Features

Operational Features

- Adjustable vibration frequency
- Adjustable airflow control
- Robust construction for industrial durability
- Compact footprint for easy installation

Model ID

TQSX125

Application Details

Suitable Materials

General Grains, Cereals
