

Sugar Cane Harvesting Machete

This machete features a blade with a section between the back-end and shank. The knife blade's front end facilitates efficient harvesting of sugar cane.

Product Overview

Optimized for Sugar Cane Harvesting

This specialized harvesting machete is engineered to maximize efficiency in sugar cane fields. The blade features a unique front-end design that facilitates clean, rapid cuts, significantly improving work throughput. Safety is prioritized through a design that minimizes risk to the operator, making it a reliable and essential tool for agricultural professionals.

Key Features

Safety & Efficiency

- Specialized front-end blade geometry
- Enhanced operator safety design
- Optimized for high-volume sugar cane harvesting
- Durable construction for field longevity

Available Models

Available Model Variants

Model ID	Application
204	Agricultural Harvesting
201A	Agricultural Harvesting
206	Agricultural Harvesting
208	Agricultural Harvesting
212	Agricultural Harvesting
2014	Agricultural Harvesting
