

Surface Mount Electronic Component

This is a surface mount electronic component. It is designed for soldering onto a circuit board.

Overview

Compact Surface Mount Design

This surface mount electronic component is engineered for reliable integration into modern circuit boards. Featuring a distinct multi-tiered structure and a translucent teal housing, it provides a compact solution for complex electronic assemblies. The component includes multiple metallic contact pads designed for efficient soldering, ensuring a secure and durable connection in demanding electronic applications.

Physical Characteristics

Contact Configuration

Multi-Pad Array • Solderable Contacts

Mounting Type	Surface Mount (SMD)
Housing Material	Translucent Teal Polymer
Structural Design	Multi-tiered, Modular Assembly
