Product Overview

Professional Suspended Access Platform

This modular suspended working platform is a high-access solution designed for maintenance and construction on high-rise structures. It offers a flexible, temporary alternative to traditional scaffolding, saving significant labor and time. The system is easily disassembled for transport and can be customized to meet specific building requirements or complex architectural configurations.

Technical Features

Operational Advantages

- Modular design for easy assembly and transport
- Customizable configurations for different building heights
- High labor and time efficiency compared to traditional scaffolding
- Enhanced safety features including guardrails and safety locks

Suitable Applications

High-rise buildings, Industry workshops, Water towers, Bridges, TV towers, Chimneys, Dams, Facade repair, Window cleaning
