

Suspended Access Platform

The suspended access platform, also known as a suspended basket or cradle, is a temporary elevated platform used for building maintenance, construction, and repair work. Designed to be suspended from above, it provides a safe and efficient workspace for workers at height.

Product Overview

Professional Suspended Access Platform

The ZLP series suspended access platform is an essential solution for high-rise building maintenance, facade repairs, and specialized construction work. Designed for maximum safety and efficiency, this cradle system provides a stable work environment for tasks such as painting, window cleaning, and installation. It features high-durability construction and integrated safety locks to ensure reliable performance under demanding site conditions.

Key Features

Safety and Performance Features

- Adjustable suspension mechanisms
- Advanced safety lock systems
- Durable heavy-duty construction
- Versatile for multiple height-access tasks

Applications

Common Applications

Building Maintenance, Facade Repair, Window Cleaning, Painting, Installation Work
