

Suspension Control Arm with Bushings and Ball Joint

This suspension control arm connects a vehicle's suspension to its chassis. It allows for controlled movement and stability with bushings, a ball joint, and a mounting hole.

Product Overview

High-Performance Suspension Control Arm

This premium suspension control arm is engineered to provide superior stability and controlled movement for automotive suspension systems. Featuring an integrated design with pre-installed bushings and a ball joint, this component ensures a precise fit and reliable performance. The assembly includes essential mounting hardware, making it a comprehensive solution for suspension maintenance and repair.

Technical Specifications

Key Components

- Pre-installed bushings
- Integrated ball joint
- Mounting hardware included
- Durable black finish

Application

Automotive, Suspension System, Chassis Component

Included Hardware

2 bolts with washers
