Product Overview

Suspension Trauma Relief Strap

This suspension trauma relief strap is a critical safety accessory designed to mitigate the risks associated with suspension trauma following a fall. By allowing a suspended worker to stand up in their harness, it helps alleviate pressure on the femoral arteries and improves blood circulation while awaiting rescue. The system is compact, lightweight, and easily deployable, making it an essential component for any comprehensive fall protection system.

Technical Specifications

Webbing Material	Polyester
Webbing Width	20 mm
Maximum Length	1050mm + 1200mm
Hardware Material	Steel
Size	Universal
Color Options	Black, Customized

Usage Instructions

Illustrated guide on how to deploy the relief strap during an emergency.

Deployment Steps

- Un-zip the pouches fitted on both sides of the harness.
- Hold both straps together.
- Connect the straps with each other using the buckle to form a loop.
- Place feet into the loop.
- Stand onto the loop so that the thigh straps are free to move.
- Adjust the sit strap towards the front to release pressure and create a seat-posture.
