Product Overview

High-Efficiency Water Heating Solution

This air-source heat pump offers an economical and sustainable way to heat water for domestic applications. By utilizing renewable energy from the surrounding air, it achieves significant energy savings of up to 80% compared to traditional gas or electric systems. The unit is engineered for reliability, featuring a whisper-quiet fan, robust compressor, and advanced intelligent controls to ensure optimal performance in various conditions.

Technical Specifications

Performance Metrics

80 %
Energy Savings

Refrigerant	R410a
Core Features	High Efficiency, Reverse Cycle Defrost, Whisper Quiet Operation, Hydrophilic Fin Coating

Installation and Maintenance

Installation Requirements

- Compatible with various water tanks
- Easy installation design
- Includes 4-way valve
- 100% factory tested
