

Swimming Pool Heat Pump with Digital Temperature Control

This swimming pool heat pump is compact and easy to install for new or existing pools. It features a constant temperature controller and temperature sensor for improved stability and adaptability.

Product Overview

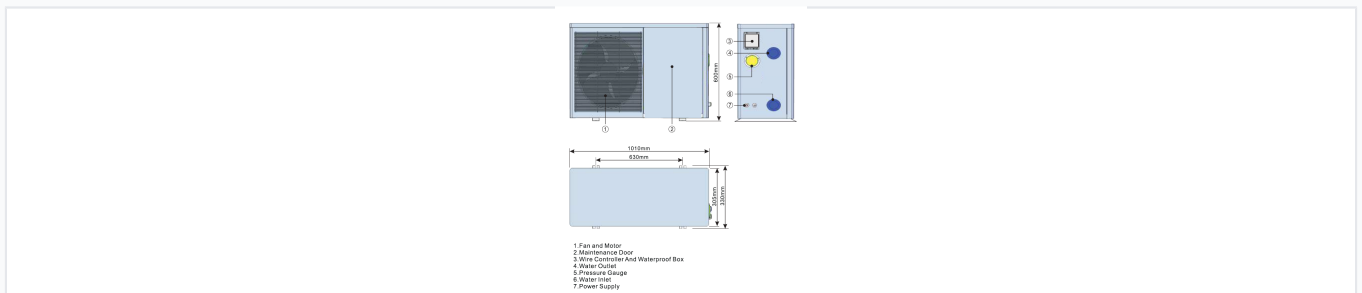

Smart Pool Heating Solution

This high-efficiency swimming pool heat pump is designed for reliable, cost-effective temperature management. It features advanced heat exchange technology to extract heat from ambient air, and utilizes a precise digital controller for 1-degree temperature adjustments. Designed for durability and stability, the unit replaces traditional magnetic flow switches with advanced sensors for improved performance and longevity.

Technical Specifications

Control System	Digital temperature controller with 1-degree increment precision
Flow Sensing	Advanced constant temperature sensor (replaces magnetic flow switch)
Key Features	Compact Design, Flow Activation, Weather Resistant, Easy Installation, Quiet Operation
