

Swimming Pool Water Circulation Pump

This swimming pool pump is designed for efficient water circulation and filtration. It features a durable thermoplastic housing, resistant to corrosion and UV degradation, and incorporates a high-performance motor with thermal overload protection.

Product Overview

High-Efficiency Water Circulation

The CSPA-A swimming pool pump is engineered for reliable water circulation and filtration in both residential and commercial pool environments. It features a durable, corrosion-resistant thermoplastic housing designed to withstand UV degradation for long-term outdoor performance. Equipped with a high-performance motor and thermal overload protection, it ensures consistent operation and enhanced safety. The inclusion of a large-capacity strainer basket reduces maintenance frequency, making it an efficient choice for various pool sizes.

Construction Materials

Pump Body and Diffuser	Glassfiber and polypropylene mixed
Impeller	Glassfiber and nylon mixed
Shaft Material	Stainless steel
Mechanical Seal	Graphite and ceramic
Motor Housing	Aluminium

Key Features

Maintenance Components

- Large capacity strainer basket
- Easy start-up mechanism

Key Operational Features

Self-priming, Thermal overload protection, Corrosion resistant, UV resistant
