

Synthetic Web Sling for Load Lifting

These web slings are designed for lifting heavy loads. They are constructed from durable synthetic materials and offer flexibility and resistance to abrasion.

Product Overview

High-Strength Synthetic Web Sling

These synthetic web slings are engineered for demanding industrial lifting applications, providing a reliable balance of strength and flexibility. Constructed from durable synthetic materials, they offer high resistance to abrasion while ensuring safe handling of heavy loads. The design features reinforced eyes to provide secure and stable attachment points during operation.

Technical Details

Material	Synthetic
Key Features	High-Strength, Abrasion Resistant, Flexible, Reinforced Eyes
Capacity Identification	Color-coded for specific weight capacity

Usage Information

Ideal Applications

- Industrial lifting
- Load handling
- Heavy material transport
