

Synthetic Winch Rope for Vehicle Recovery

High-strength synthetic winch rope designed for off-road vehicle recovery. Features a durable construction with a yellow protective sleeve and a metal thimble for secure attachment to winch hooks or shackles.

Overview

High-Performance Recovery Solution

This high-strength synthetic winch rope is engineered specifically for reliable off-road vehicle recovery. Designed to outperform traditional steel cables, it offers a lightweight, easy-to-handle alternative that does not compromise on durability. Featuring a protective sleeve and robust metal thimble, it ensures secure attachment and longevity in demanding environments.

Technical Specifications
