

# T17 Self-Drilling Screws

These screws are designed for self-drilling and tapping into materials. They feature a sharp point and coarse threads, making them suitable for applications in machinery, construction, and woodworking.

## Product Overview

### T17 Self-Drilling Screws

T17 self-drilling screws are engineered for efficient fastening in demanding applications, featuring a specialized sharp point and coarse threads that allow for simultaneous drilling and tapping. These versatile fasteners are suitable for a wide range of tasks across machinery, construction, and woodworking industries. With multiple head type options available, they provide a reliable solution for securing materials quickly and securely.

## Technical Specifications

### Key Features

- Self-drilling point
- Self-tapping threads
- Coarse thread design

### Screw Type

T17 Self-Drilling

### Available Head Types

Flat Head, Hex Head, Pan Head

## Applications

### Primary Industries

Machinery • Construction • Woodworking
